

Bifrost Orchestrator

An app for Microsoft Dynamics 365 Business Central, on Bifrost Foundation

BIFROST.
ORCHESTRATOR

Routines that run themselves, and a Job Queue that looks after itself.

Bifrost Orchestrator turns a routine into a playbook, runs it when it should, and tells you when something fails. It is an add-on to Bifrost Foundation.

The screenshot shows the Bifrost Orchestrator interface within a Microsoft Dynamics 365 Business Central environment. The top navigation bar includes tabs for Cash Management, Sales, Purchasing, and Shopify, along with an 'All Reports' link and a menu icon. Below this, a 'Bifrost Playbooks' section is visible, featuring a filter dropdown set to 'All' and action buttons for '+ New', 'Delete', and 'More options'. The main area displays a table of playbooks with the following data:

Code ↑	Description	Last Run Status	Last Run At
DOC-RELEASE	Reference: release stock reservations matching a filter, guarded by th	Draft	
REF-RELEASE	Reference: release stock reservations matching a filter, guarded by th	Draft	
TEST-MON-RELEASE19	Monday: release Legacy stock reservations for items 19*	Draft	

Your routines as playbooks, ready to run or schedule.

What it does

- Turns a routine into a playbook: a list of steps where one step's answer feeds the next. List the overdue orders, release them, tell the right person. No code.
- Runs it when it should: by hand, on a schedule through the Job Queue, or when an assistant or another system asks.
- Looks after the Job Queue: watches entries, restarts them when they fail and retries by the rules you set.
- Tells you when it matters: an email or a Telegram message when a job fails or restarts.
- Shows what happened: every playbook run is kept step by step, with what each step was sent and what it answered.
- Runs reports on demand: list, run and save reports as PDF, Excel or Word.

Who it is for

Business Central administrators and finance or operations teams with recurring work, and partners who build automated routines for their customers.
